Introduction

Hello future multi-Bitcoiner. Today I will be introducing you to a method that will turn your empty bitcoin wallet into tens of bitcoins.

I have personally made 20 bitcoin off this method starting from nothing, and it is a surefire way to safely increase your Bitcoin wealth.

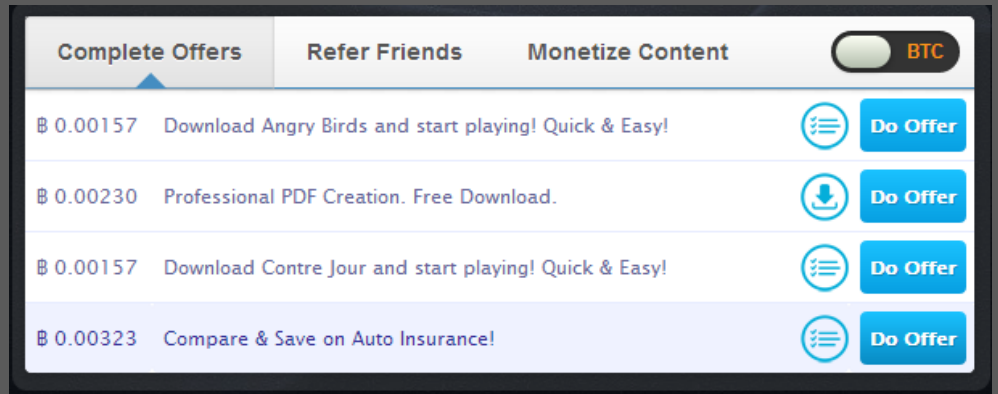

The method we shall be using is bitcoin merchanting via Hackforums/Coinbase and LocalBitcoin, making up to 15% margins per transaction.

This seems superficial, how does this work exactly?

This method works by buying Bitcoin at a 1% fee from a distributor, in this case, we recommend Coinbase. Once you've bought the Bitcoin at this cheap price, you post an ad on LocalBitcoin, offering to sell the Bitcoin at a 10-15% markup fee. You meet someone in real life, get the money for the Bitcoin, profit, and repeat. Assuming you have just \$100, the first time you use this method, you will have profited \$15. If you have \$1000, the profits reach \$150 for the same work.

Below we have provided more detailed explanations on the website we shall be using to buy and sell the bitcoin, as well as a method for obtaining bitcoin if you currently have no money to invest.

These offers pay up to .003 BTC per offer, meaning that in just a few hours, you can

build yourself \$50, enough to start making some profit using this method. In fact, I personally used Bitbucks to kickstart my initial bankroll for this method, and it worked out quite well as a result.

What is Coinbase?

**Buy, sell and
accept Bitcoin**

(Click Coinbase above to sign up)

Coinbase is a website where you may buy bitcoin for just a 1% markup using your bank account. This fee typically ranges up to 15% if buying on Hackforums, and thus is the convenient choice for buying Bitcoin. You may sign up by clicking the image above. Once you have signed up and confirmed your email, go to Resources (Top Right Corner) and go to buy bitcoin.

Coinbase requires your bank account so you must connect it in order to buy from here. Once you do, you may buy or sell as many Bitcoin as you may afford off Coinbase. As a result, we now have our supply of bitcoin needed to begin selling for a markup.

Buying off Hackforums Via Paypal

Simply make a thread on Hackforums, stating that you wish to buy Bitcoin for Paypal at a (Preev + 5%) rate, and bump your thread.

Eventually you'll be able to buy Bitcoin for Paypal. Just remember to check that the person you are selling to is legitimate, and has no scam reports.

What is Local Bitcoins and how do we sell Bitcoin here?

(Click image above to sign up)

LocalBitcoins.com is a site where buyers and sellers of bitcoin may post ads for Bitcoin sale meetups in real life. LocalBitcoins meetups exists everywhere around the globe, so regardless of where you are you will be able to use LocalBitcoins. Begin by clicking on the image above to sign up.

Once you have signed up, go to Post a Trade, and begin by filling out the form. For your margin we initially recommend 10%, and have it increase as your volume of transactions increases. We also recommend meeting up somewhere public and with wifi, such as Starbucks.

People will begin to contact you, and you may communicate via LocalBitcoin's communication system. Once you plan an exchange, you both may meetup at your desired location, you will receive the cash, he will receive the Bitcoin (As you release it on your phone once he gives you a code). Finally, we have turned our cash to Bitcoin, and back to cash +10-15% extra of what we began with, which we recommend redepositing into your Bank Account for future Coinbase Payments.

Some helpful advice would be to perhaps do your homework or other activities at Starbucks while conducting this business, as you can multitask and save time as a result.

Full Cycle and Conclusion

So what have we done? Well, we initially began by buying Bitcoin at a relatively cheap rate, be it from Coinbase or Hackforums. We then posted an ad online on a reputable site, LocalBitcoins, where we sold our Bitcoin for Cash + Markup. We then redeposited this cash and repeated.

Now, you may be thinking, if I only have \$50, why am I doing this to make \$7.50. Well, the results are exponential. You begin by making \$7.50 your first go around, but as your bankroll increases, your profits increase. If you reach \$1000, now every merch will profit you \$150. The growth will always continue, and the more dedicated you are, the more you will make. I wish you all the same success I've had with this method, and will always be available for assistance!
