

COLLEGE CASH

Intro:

This method relies on your ability to find files on the internet something that is incredibly easy for someone like us, if not dont worry ill cover how to find them in the steps

Requirements:

- Internet
- Patience
- be a college student on campus no online courses
- flashdrive
- optional: tablet,laptop

Step 1: Recon

Most colleges have a book store, head on over to the college bookstore with a pencil and paper grab the names of a few books popular ones are english,math,art. A good starting point is your own classes.

HTML5 and CSS: Complete (Shelly Cashman Series) by Denise M. Woods (Apr 19, 2012)

Step 2: google it

with the names of the books start googling them and downloading the books preferably in pdf format

if you need help finding the books googling the following terms

- book pdf
- book pdf download
- book zip
- book rar
- sites to check as well are
- <http://www.warez-bb.org/>
- <http://scrapetorrent.com/> (torrent search engine)
- <https://thepiratebay.sx/>

make sure to download them once you find them be careful as some links lead to Sharecash links and are usually fakes.

Sub-method: once you have some books upload them to sharecash/fileice/etc. This method seems to work but your blogspot will most likely get taken down if you get too many visitors either way it kinda keeps it from getting too saturated

1. upload books to any ppd of your choice
2. create a blogspot with keywords "college books free" something like that
3. create posts each post including your survey link, isbn number, title of the book, and the cover as well my format is title of book, isbn number
4. report any links for books you already downloaded so they get taken down this discourages any copycats and herds visitors to your working links if they search again for the book and find your blog from the main method
5. seo the blogspot
6. keep updating it

now everytime a student looks for their class book in digital format they will meet with your blog and download from your link earning you money

Back to the main method

Step 3

Put them on a flashdrive or if you have a tablet download an app that displays PDF files and put them on the tablet's file system for browsing i recommend perfect viewer if you have a laptop have them well organized in a folder

Step 4

Now the way to sell the books to students is kinda the same as selling drugs be quiet dont announce it and dont get caught.

One way i sell to students is make some small talk ask what class they're taking then ask if they have gotten their books usually most say no. Thats when you bring up that your selling class books in digital format. This is where the tablet comes in to showcase you actually have the books and if they arent interested in that book they may see another book from one of their classes. I usually sell for 5\$,10\$,20\$.

If you dont have the book they're looking for simply offer to find it for them for a fee. I usually charge 10\$ if they refuse simply move on.

Once you sell a copy of a book transfer it to their flashdrive, or if they have a tablet use a bluetooth file transfer app let your customer choose

I personally just upload the file to media fire and once i see them download it i delete the file to ensure they dont start sharing the URL

Questions

What if i get caught?

Your money may get taken by security my friend got his money taken and a warning to call the police due to "piracy" i believe its just a scare tactic but better be careful

How do i know this works?

Hipsters are the ones that make this method work mostly i have gotten many hipsters

Buy my books for their ipads of course other customers are there but my clientel have mostly been hipsters

Thus we concludes my method hope you make some cash!
